

# Data Security & Resilience

Powered by Dell Technology

Celerity, a Dell Platinum Partner with over two decades of experience, specialises in the delivery of enterprise solutions and services encompassing an extensive range of Dell products.

Our extensive knowledge and expertise extends to managing, monitoring, supporting, and optimising critical enterprise infrastructures for clients across various sectors, including government, defence, aviation, health, finance, and commercial enterprises on a global scale.

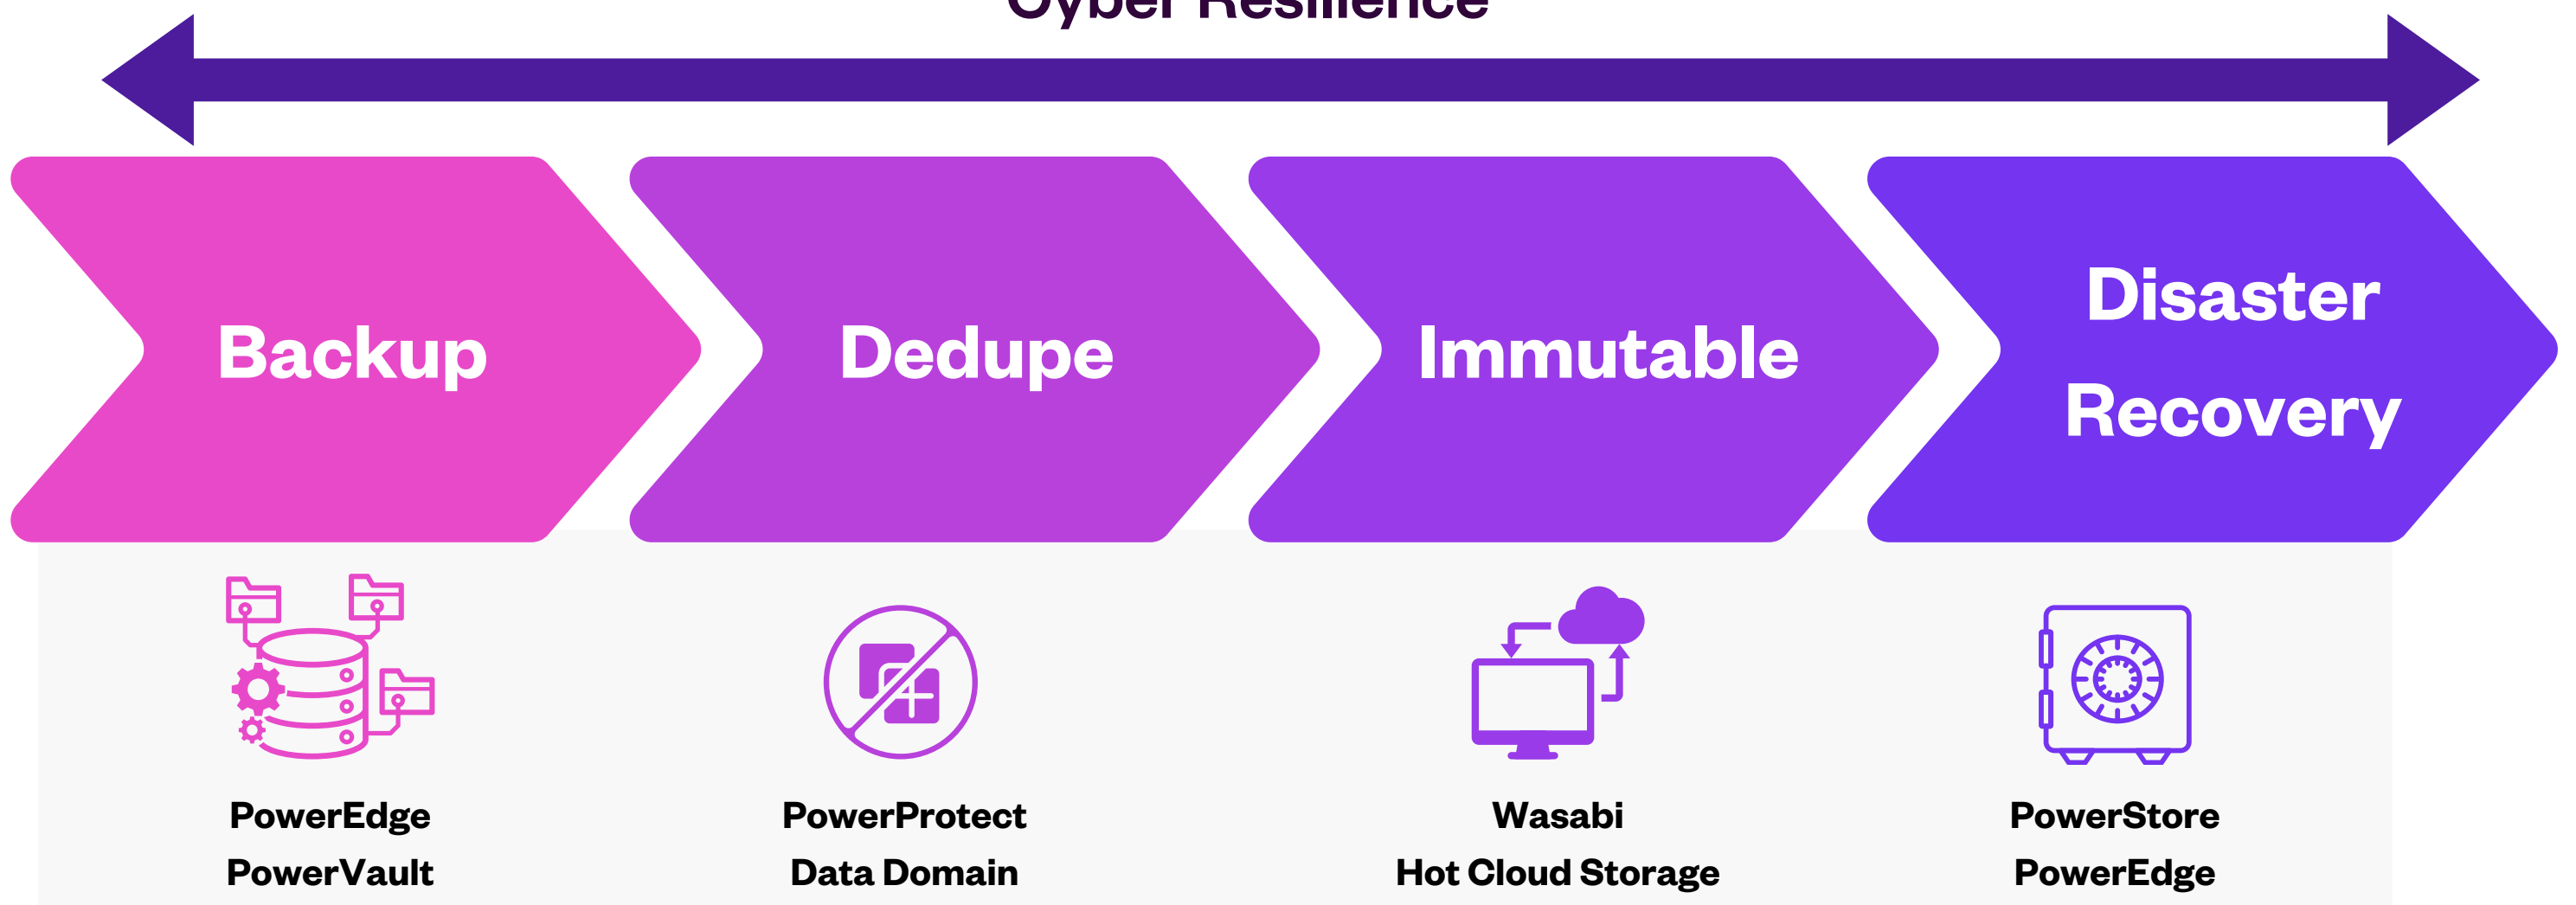

Regardless of the data's location, Celerity, using Dell's Data Protection Suite, ensures security, flexibility, performance, and a consistent user experience for clients. This approach enhances business resiliency for an organisation by safeguarding critical systems and swiftly identifying suspicious activities, expediting the recovery process.

## Secure your data with Celerity's managed service:

- Minimise risk & downtime: Advanced replication and rapid restore protects against human triggered events and natural disasters.
- Reduce IT resource: Allow your business to redirect IT resources to more pressing tasks & strategic initiatives by taking advantage of Celerity IT expertise & resource.
- Stronger compliance safeguards: Industry knowledge maintains your regulatory and compliance coverage.
- Predictable budgeting: Subscription-based pricing that scales in line with your business requirements.
- Customisable: Range of cloud-based backup models tailored for your environment. Leverage any mix of public, private, or hybrid cloud delivery models.

## Celerity Data Protection Managed Service Overview:

### Cyber Resilience

Managed by Celerity. Powered by Dell.

## Data Protection Managed Service Breakdown:

### Backup:

An on-premise solution consisting of:

- Veeam backup software:- multi-hypervisor backup support covering VMware, Hyper-V, Nutanix, Red Hat virtualisation. Protection and bare metal recovery for Windows, Linux and AIX.
- Deployed on Power Edge Server with PowerVault Storage and or Data Domain for local operational backup and recovery
- Includes an off-site cloud-based copy of backup data for recovery from a cyber-attack in the event all on-premises components are compromised.

### Dedupe:

An On-premise solution consisting of:

- PPDD for industry leading De-duplication and secure replication of backup data to offsite locations.
- Hub spoke architecture, that enables Celerity to offer space efficient multi-tenant target repository in public/private cloud. This delivers a Ground to Cloud enabled backup service.
- Facilitates Disaster Recovery in the event of a primary datacentre outage or cyber-attack.

### Immutable:

A Cloud hosted solution consisting of:

- Cloud Object Storage for Archive/Compliance or cyber recovery use cases
- Immutable AirGapped storage tier to ensure data cannot be modified or deleted in the event of a cyber-attack.
- Consumption based license model with no egress or access charges.
- Predictable pricing compared to other Cloud Hyper scalers.

### Disaster Recovery:

A Hybrid Cloud solution consisting of:

- Celerity private cloud delivering a recovery environment built on Dell PowerEdge server and PowerStore storage.
- Recovery orchestration and automation for parallel system recovery to meet customer Recovery time objectives.
- Cloud enabled using Power Protect Data Domain and Veeam for recovery into the public cloud.

Managed by Celerity. Powered by Dell.
